

**Figure 20. Oklahoma dental measures compared to Healthy People 2020 targets**

The statewide prevalence for total dental caries experience in Oklahoma third graders is 66.0%, which is higher than the Healthy People 2020 objective (49%). The total dental caries measure from the 2016 survey has worsened from the previous 2013 assessment. The prevalence of active decay in Oklahoma (22%), defined as untreated caries in at least one permanent or primary tooth, reached the goals set by Healthy People 2020 (25.9%). The proportion of children with protective sealants in Oklahoma (25%) failed to reach the goal set by Healthy People 2020 (28.1%); however, Oklahoma met the goal in the 2013 survey.

Large regional differences are observed in the results of the oral health needs assessment. The NE and SE regions have the highest prevalence of active decay (31.7% and 26.8%). Tulsa County has the lowest proportion (10.4%) of children with active (untreated) decay. None of the regions meet the Health People 2020 objectives for prevalence of total caries (49%). The SW region, the NE region, and Tulsa County are the only regions to
